1108. Defanging an IP Address

Easy   👍 157   👎 450   ♡ Favorite   ⬆ Share

Given a valid (IPv4) IP `address`, return a defanged version of that IP address.

A *defanged IP address* replaces every period `"."` with `"[.]"`.

Example 1:

```
Input: address = "1.1.1.1"
Output: "1[.]1[.]1[.]1"
```

Example 2:

```
Input: address = "255.100.50.0"
Output: "255[.]100[.]50[.]0"
```

Constraints:

- The given `address` is a valid IPv4 address.
